The Basics of Troubleshooting

by Joe Grant, Principal Architect (**@dba_jedi**)

No matter how resilient your attempt to design an application system, something will always go wrong. The issue then becomes what to do about it when you get the call that something is broken and it is your responsibility to fix it. This can be from the simple "something is slow" call all the way to a report the system is down. In this series of articles, I will walk through the process that I use when trying to find the cause of an issue. In this first article we put first things first. These are the things you need to know before you get "the call."

Multi-Master Oracle Replication Using GoldenGate Blog Series

by Andy Kerber, Senior Consultant

In this four part series, I will provide an example of how to set up replication using Oracle GoldenGate. In part one, we will set up Multi-Master replication between two Oracle databases. In part two, we will add one way replication to MySQL. In part three, we will add one way replication to PostgreSQL. In part four, we will add a third master database, Oracle version 11.2.0.1, where we cannot use integrated replicat and extact.

Part 1: Multi-Master Oracle Replication Using GoldenGate
Part 2: Replication from Oracle to MySQL Using GoldenGate
Part 3: Replication from Oracle to PostgreSQL Using GoldenGate
Part 4: Oracle 11.2.0.1 Replication Using GoldenGate

On Demand Webinar: Oracle Baselines and Benchmark for the Business

Presented by: Jonas Mason, Senior Consultant & Joe Grant, Principal Architect

Businesses sometime ignore Oracle database performance until poor performance impacts profitability, or the cost of Oracle licensing becomes significant. But this consideration frequently comes a bit late, and can cause tension between the business and technical staff.

Hear how we have helped our clients bridge the gap between business needs and technical resources. Learn how using the right tools, like Statspack and AWR, can help identify performance trends and enable a healthy dialogue between the business, technical, DBA, developer, and infrastructure teams.
