Oracle Concurrent Device Licensing

by Jeff Stonacek, Principal Architect

Overview
Oracle licensing is a very complex topic. To further complicate things, different metrics have been used to license core technology products (Database and Middleware) throughout the years. The most common metrics currently in use are Processor and Named User Plus (NUP) metrics. However, there are also deprecated metrics like Universal Power Units (UPU) and Concurrent Device (CD). Many customers we work with have older contracts for which they are still paying support. If this is the case, then the products with up-to-date support, even with older metrics, are valid for use.

Oracle Workloads in the Public Cloud

Presenter: Dave Welch, CTO & Chief Evangelist

What's going on with Oracle core technology workloads in the IaaS Cloud market? What customer activity are we seeing in that space? What are the opportunities and challenges? How have those opportunities and challenges shifted?

Dave Welch, CTO and Chief Evangelist at House of Brick Technologies answers these questions and more, and takes a technical deep dive into Infrastructure-as-a-Service and the cloud market in 2019.

Monitoring Database Mail for SQL Server

by Phil Ekins (@SQLPhilUK), Principal Architect

The second blog in this series on Database Mail discussed how to troubleshoot and identify some common issues seen with Database Mail and some options for resolution.

In this blog, we shift our focus to being proactive, and how we can get SQL Server to identify, self-heal, and finally, if needed, notify us when email is down.

Why does Oracle keep trashing MySQL, its own product?

Oracle CTO Larry Ellison can't get enough MySQL bashing into his earnings calls. Is there a method to this madness? By most accounts, Oracle has been a reasonably good steward for MySQL, the open source database it picked up when Oracle...
