

Real World Perspectives of Database on Cloud – Accelerated by AWS

by Bob Lindquist, Director of Client Services

House of Brick Technologies has been assisting clients with their business-critical applications for over twenty years. In that time, we have seen many changes regarding how database platforms are deployed, licensed, and managed.

Over the past few years, we have consulted with a growing number of organizations deploying database workloads on the cloud. While there have been a few challenges, such as concerns about licensing, they have been outweighed by the benefits including self-managed database services.

AWS has accelerated adoption of database on cloud deployments. While some organizations have chosen to move slowly, House of Brick has helped others to quickly deploy databases to cloud. The following perspectives offer a variety of real-world examples.

The Oracle RAC Dilemma - Part I

by Dave Welch, Chief Evangelist

Part I: Four Criteria for Introducing or Keeping RAC

VMware vSphere High Availability can provide significant levels of high availability for many workloads. VMware HA does so without the complexity, fragility, or cost of Oracle Real Application Clusters™ (RAC).

Oracle RAC can introduce significant complexity, expense, and risk into a system stack. There are many shops that experience net worse HA with RAC than with single instance Oracle databases on VMware HA.
