SRM Assessment Service

House of Brick (HoB), through its work with business critical systems, brings a unique perspective to the implementation of Site Recovery Manager (SRM). House of Brick works closely with clients in understanding their Disaster Recovery (DR) vision including which business critical applications can have the biggest impact on their organization's bottom line.

w h y   c h o o s e
HOUSE OF BRICK?

- House of Brick has assisted customers with SRM reference architecture and implementations
- House of Brick understands RDBMS legacy DR versus value of SRM for business critical workloads
- House of Brick understands how SRM may reduce Oracle Database and Microsoft SQL Server license/support maintenance spend
- House of Brick has a history of best practice standardization and mentoring for customer post-implementation independent support
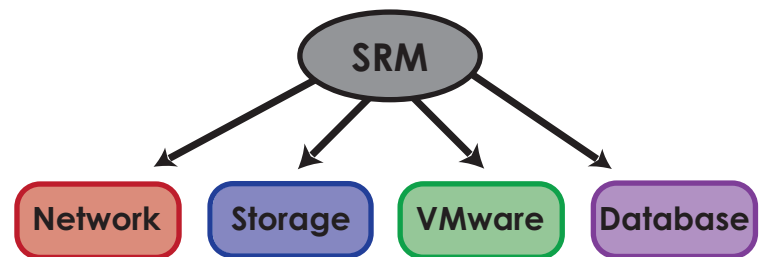

6 Reasons to Utilize Site Recovery Manager (SRM)

1 - Cost reduction through standardization

2 - Automate disaster recovery workflows

3 - Reliable disaster recoverability

4 - Migrate datacenters cost-effectively

5 - Test/QA process improvement

6 - Create automated recovery plans
