Starting Your Cloud Journey? Get Secure.

We've worked with a number of clients over the past several years to assist with Oracle licensing. This has included everything from license compliance assessments to full entitlement & deployment governance.

You may not be in in the cloud yet, but if you're starting to develop a cloud strategy, you need to make sure you're secure.

As the Global Services division of [OpsCompass](#) we provide our customers that have an interest in the cloud with a quick way to see exactly what's in their environment, how secure it is, and the insights to fix the problems that impact them the most.

Get real-time visibility and control into your cloud environment within minutes.

[From On-Prem to Cloud: Building, Managing & Protecting Your Infrastructure](#)

by Dave Welch, CTO at House of Brick Technologies

Many organizations have discovered that they overshot in their migrations to the cloud by not enabling a hybrid cloud model. It was my privilege to moderate the Bright Talk hybrid cloud session at VMworld 2019 U.S. The webcast is more relevant now than ever.

[Remove Azure Disk from Linux Guest](#)

by Jeff Stonacek, Principal Architect

I recently had the opportunity to work with a client that needed to remove some unused disks from Azure. The guest operating system was Linux, not Windows.
