How are you addressing the cloud skills gap required for the future?

According to Gartner, “Through 2022, more than 50% of I&O organizations will fail to meet company cloud adoption goals, due to a lack of in-house skills and experience.”

So how are you addressing your cloud skills gap? Upskilling your people? Refining processes? Introducing new technology solutions?

Check out this complimentary Gartner report offering a variety of insights and recommendations to address challenges your organization may be facing due to skills related shortfalls. (via [OpsCompass](#))

[Oracle Licensing Tools: Compliance & Governance Best Practices \(Part 1\)](#)

by Bob Lindquist, Director of Client Services & Strategic Business Development

Oracle produces a number of very good enterprise technologies, particularly their Database and related Technology stack of products. Companies of all sizes have been running their most business-critical systems with Oracle technologies, even if the cost of running the platform has been close to 30% or more of a company's IT budget.

[vMotion Enhancements in vSphere 7](#)

by Jim Hannan, Principal Architect

In my last blog, I touched on the enhancements to [DRS](#) in vSphere 7. In this blog, I will cover what is new in vSphere 7 with vMotion, which has always been an important component of vSphere. vMotion (aka live-migrate as most of you know it) allows for the movement of virtual machines from one ESXi host to a new ESXi host destination.

[Oracle Proprietary Application Hosting Dangers in AWS](#)

RDS

by Nick Walter, Principal Architect

At House of Brick we field a multitude of questions from our partners and clients about Oracle licensing pitfalls and traps. In some recent conversations a new wrinkle on an old danger, Proprietary Application Hosting, has come to our attention.
